#1. 10 Lotto Playing Mistakes You Should Avoid At Any Cost

Every day I see lottery players making these obvious mistakes, and wondering why they are not getting more wins.

So here's 10 playing errors you MUST avoid - it will make you a better player:

- 1. Don't play just when you feel like it.** Have a timetable and stick to it. Once a week, twice a month... whatever it is, set your play times in concrete.
- 2. Don't play on popular days.** Many players lock themselves into a Saturday game and have to share their jackpot with dozens of others. Ask your local lotto shop which day is least popular and play on that one.
- 3. Don't mess with a system that works.** Some Silver Lotto System buyers put their own numbers in 'for good luck.' This will give them worse results. You cannot beat a proven system.
- 4. Don't change your numbers.** If you have the budget to play 20 lines from the Silver Lotto System, then stick to those numbers each game. Don't think another different 20 lines for every game will be better - it won't.
- 5. Don't miss games.** The major winners in any lotto game play EVERY time until their win comes up.
- 6. Don't give up too soon.** Every breakthrough in life - and lotto - has come just when things seem to be at their bleakest.
- 7. Don't think you know it all.** Subscribing to the Lotto-Daily newsletter (<http://www.silverlotto.com/#ezine>) and reading each issue will give you little known information that could improve your winning streak.

8. Don't think you are losing your entry fee (buying tickets) when you don't get a win. Paying for your tickets is a necessary requirement, and you need to be in to win.

9. Don't play games with 7 balls if you want frequent winnings. Stick with low ball games. Play 5 ball games, then 6 ball games only if you have no other choice. The odds of winning improve with the lower ball games.

10. Don't play the games with the highest numbers - instead, play the game with the lowest. The lower the number of numbers in your game, the better your odds. If you have a choice of playing two games containing, say, 35 numbers or 60 - go for low!

#2. 3 Essential Tips For Your Lottery Game

Whatever lotto game you decide to play, first do these important checks:

1. The game is state backed. Make sure your government is behind it for added security.
2. Do not play lottery games that use computer generated numbers. Make sure they are real balls - ping pong balls are most common - in a washer barrel machine.
3. Ensure the draw is a continuous one filmed from start to end without a break. Why? There's some rumors going round that the computer generated random numbers (RNG) some games use may not be secure.

There is a chance that they could be manipulated, hijacked or have hidden features that alter the draw. This also applies to online lotto as well. The chances of getting a win when you can't physically see the numbers being drawn makes these difficult to play without risk.

The best way to get entirely random numbers and be sure of your game is to do this:

- (a) Monitor the numbers from past draws and ensure they don't follow a strange or unexplained pattern, and,
- (b) Play games that have a manual number selection with no human intervention and plenty of security. No computer-generated numbers!

#3. Should You Play 7 Ball Games?

I often recommend not playing the big games - the ones with a large number of balls and numbers, and especially the 7 ball games (6 main balls and a jackpot ball).

Here's why you should avoid these big games:

1. More people are attracted to these games because of the higher winning amounts. That means your prize could be shared by many others. Suddenly your \$100 million could become just \$2 million, and maybe paid over 20 years too.
2. You have to spend more. That extra 7 ball hugely increases the amount you have to spend on tickets.
3. The length of time you have to play to get better odds increases a lot. While you might have a big win every year with a smaller game, the sheer numbers of a 7 ball game means you might have to play for 10 years to get lucky.
4. The high odds of 7 ball games make your win chances very slim. You'll need lots of luck to even get a free ticket.

#4. Do You Make These 5 Common Game & Ticket Mistakes?

Many lottery players make these 5 common mistakes when they play:

1. They play on the wrong day.

Every Lotto game in the world has a popular day. It may be that the prizes have jackpotted to become the biggest on that day. Or it could be a day that most people have free to buy a ticket... for example a Saturday. Here's the problem. When everybody plays at the same time, the number of tickets in circulation for the game are huge. The solution is to play on a less popular day. You find that out by asking your friendly Lotto shop store. They'll soon tell you which days are least frequented by players.

2. They don't play enough lines.

Some players expect to get a good result on playing simply 1-3 lines of the Silver Lotto System. While it is true you will get a better result by playing these small number of lines - one or two lines are not enough at any time. Instead of playing a small number of lines every week, you should save them up until you can afford to play a number of lines in one hit. Take a couple of lines in between these times just to keep your enthusiasm going.

3. They fill out the tickets incorrectly.

For some reason, some Silver Lotto System buyers want to change the order of numbers each time they play. This is not the way the system is designed to work. Use the same numbers each time.

4. They play too many games.

A lot of players are conditioned to play once or twice a week. The problem is that it becomes very expensive if they play games that don't have a matching number selection at that time. I've managed to get around that with the Lotto-80 system: <http://www.lotto-80.com>. It selects the games which have the best match with the Silver Lotto System.

5. They are too impatient.

A lot of people write and tell me they are only winning a few hundred dollars a month. They asked me what the problem is. The answer... there is no problem. The [Silver Lotto System](#) is working. They can easily tell that because it's a simple fact that many people don't win this amount even once in several years.

These small wins show the system works and it only remains to stay in the winning pattern and wait until the numbers get the Big One!

#5. Should You Buy From A Lucky Shop?

Are you a lucky lotto shop ticket buyer? Do you search out the shops which have had the largest number of winners to buy your tickets?

Actually luck doesn't help you one tiny bit in where you buy your tickets. In fact, the shop that advertises a large number of lotto division winners may not be lucky at all - but busy!

These 'lucky' shops do nothing more than get a larger percentage of lotto ticket buyers than their competitors. There's no such place as a lucky store!

#6. What Secret Number Should You Always Include?

Britain's National Lottery Commission released a report that stated since the number 38 popped up so many times, lotto games seemed not to be random.

The two academics who completed the report said that number 38 was

drawn so many times that they wondered whether there was a fault in the draw system.

Just to reassure you - the [Silver Lotto System](#) does give you 38 in your Profiles.

The paper covered 637 draws from 1994 to 2002 and said:

- Some number combinations popped up with unusually high frequency.
- Other numbers showed a major departure from randomness.
- The number 38 was drawn so many times that they wondered whether a ball inspection was required.
- The bonus ball would usually be a high number - 40 or above.
- Thunderball draws that were 4 weeks apart seemed to 'talk' to each other. If one game favored a high set of numbers, then there would be a correspondingly low set 4 draws later.

My advice - disregard these theories. Numbers are basically random, and winning should be based on more advanced practices that the Silver Lotto System has already calculated for you.

#7. How To Make Your lottery Tickets Secure

If you don't want to lose your winnings before you get them, here's 5 essential things you should do first so you don't get caught out with a loss of a lifetime:

- 1. Photocopy your tickets.** Store them in a safe place.
- 2. Write your name on every winning ticket.** Include the words "ticker owner" if you wish, but generally you'll be able to prove your name with your ID or driver's licence etc.
- 3. If you give lotto tickets as a gift,** make sure the recipient can claim them. If the game requires players over the age of 18, it will be a few long

years before your 12 year-old niece or nephew gets to spend their \$50 million from the ticket you gave them for their birthday.

4. Playing in a syndicate? At the very least you should have a document signed by everyone who takes part, with a brief description of the games you are playing, the amount you put in and what share you will get on winning. It keeps everyone honest.

#8. Revealed - How the Silver Lotto System Works

My Silver Lotto System is the only one that removes "bad" numbers. These are the millions of numbers and number sequences that will never appear in any winning lotto game.

Through years of research I've identified most of these, and so I've managed to increase the percentage of successful numbers that will appear in a winning ticket.

Sometimes win rates with my system can be as high as 99%. Many times, with enough lines, I've won a prize in every game I've entered for months on end.

While this gives excellent results, it's a fact that the last 1% of random winning numbers not covered in the [Silver Lotto System](#) can only be won with pure luck.

#9. Patterns You'll Never See Win

Numbers do behave in a pattern that is not quite random, but not orderly either. And the best example is a pattern I have never seen in my years of research.

I call it the 1-2-3-4-5-6 bad-boy pattern.

It can also be 2-4-6-8-10-12.

Or 42-41-40-39-38-37.

You are unlikely to get those numbers all meeting together at one time in one game. The chances are very remote indeed. And most players know it. That's why you never see this kind of pattern picked on a board or coupon... or even as a drawing from the computer pick.

Because everyone knows they are hugely unlikely to occur.

But luckily there are many patterns that are more easily identified. There are millions of other patterns arranged in different ways. Remove those bad patterns, and you have left a small percentage of random numbers that have a much greater chance of winning.

That's what the [Silver Lotto System](#) , and the Silver Lotto PRO System, and the Lotto-80 System is based on.

They squeeze as many as 99% of the bad patterns out and leave only the good ones.

#10. How to Predict Winning Lottery Games in 30 Seconds

Regardless of what lottery you play, every game gets some strange, unexplained number sequences at times. This mismatch is quite common,

and it's why you need a system that predicts skewed patterns and adjusts for them to give you better winning odds.

That's why the [Silver Lotto System](#) works so well when it's combined with the Lotto-80 System..

Here's how you can get better odds without using Lotto-80 by just viewing winning numbers from your Silver Lotto System.

Here's the steps:

1. Check out the results of the last game in your area. You can find the results by entering "YourGame winning numbers" or "YourGame results" in any large search engine. Go back to the winning numbers on the last day of play, whether a mid-week game or a Saturday one.

Make sure you view the LAST set of winning numbers available.

2. See if your game shows unusual number combinations, as in these examples:

- Three consecutive numbers together like 3, 4, 5, or 25, 26, 27, or even 41, 42, 43.
- Numbers concentrated together at one end of the play range, like 33, 35, 36, 38 or 2, 4, 5, 7, 8 (not those numbers you understand - just a pattern like that).
- Unusual patterns of close numbers of 3 or more that may be in or out of sequence. A pattern like 2, 4, 6, 8 in two areas of the winning numbers is another example.

3. If your game shows any of these patterns in the last game, then make sure you play the very NEXT game using your [Silver Lotto System](#) numbers.

Your winning chances will improve because it's unlikely these unusual number pattern sets will appear again in the very NEXT game. Research has shown that the likelihood of certain patterns repeating consistently is very rare in the following game.

What To Do Next

I hope you've enjoyed these tips and secrets. If you haven't visited my Silver Lotto System website yet, that should be your first step:

<http://www.silverlotto.com>.

Most players buy the [Lotto-80 System](#) next, as this gives the best result out of the Silver Lotto System.

Also feel free to look round at my other sites below - there's plenty of useful information to help you!

Happy winning!
